Skills

Python, FastAPI, AsyncIO, PostgreSQL, Redis, LangChain, FAISS, Docker, GCP, SQLAlchemy, Prometheus

Projects

Built a retrieval-augmented knowledge assistant for internal engineering documentation using LangChain, FAISS, and async FastAPI services. The app chunked documentation, embedded it with OpenAI models, and implemented prompt chaining for answer generation with provenance logging.

Engineered a support automation system with workflow state tracking, policy checks, and tool calling against internal APIs. The project used Redis for caching and PostgreSQL for session history, and it ran in Docker on Google Cloud Run.

Implemented evaluation scripts for retrieval quality and response grounding, comparing semantic and keyword retrieval paths to guide tuning decisions.

Experience

AI Engineer, SparkPilot — built internal search and workflow systems for product teams.

Python Developer, ArcVector — designed backend APIs for analytics and document search.
