GitHub: <https://github.com/omarhaddad>

Skills

Python, FastAPI, Pydantic, PostgreSQL, Redis, Pinecone, RAG, LangChain, Terraform, GCP, Docker

Projects

Built a retrieval engine for policy Q&A; that turned internal regulations into searchable embeddings and served responses through a FastAPI app. The system used Pinecone, retrieval ranking, and answer summarization over policy excerpts to reduce manual lookup time.

Created a document ingestion workflow that normalized PDFs, chunked content, and inserted embeddings into vector storage. I built an admin dashboard to monitor indexing health and query latency across multiple corpora.

Deployed the service on GCP with Docker and Terraform, using Redis for cache invalidation and PostgreSQL for audit logs and user history.

Experience

AI Engineer, GovernFlow — built compliance and retrieval workflows across public policy corpora.

Software Engineer, Northstack — implemented backend systems for analytics and customer workflows.
