Skills

Python, FastAPI, LangChain, RAG, OpenAI, Chroma, PostgreSQL, Redis, Docker

Projects

Built a RAG chatbot for internal product documentation using LangChain, Chroma, and a FastAPI backend. Users could ask questions about architecture, onboarding, and release notes, and the app surfaced source snippets and citations.

Implemented an ingestion pipeline that normalized Markdown and PDF files, chunked them for retrieval, and retrained vector indexes after content updates. I added cache warmups and answer logging to support faster subsequent queries.

Worked with product and support teams to tune retrieval prompts and chunk size based on common user questions and documentation structure.

Experience

Machine Learning Engineer, EchoWorks — developed retrieval and search experiences for internal docs.

Python Developer, BuildHome — maintained API services and internal tooling.
