Skills

Python, LangChain, RAG, Azure, FastAPI, OpenAI, FAISS, SQLAlchemy, Docker

Projects

Created a support chatbot for internal knowledge bases using LangChain and retrieval over hundreds of technical documents. The app combined prompt templates, vector search, and answer grounding to support over 50 common support topics.

Built the backend in FastAPI with Azure deployment, SQLAlchemy models, and API endpoints for user sessions and conversation history. I also added basic conversation memory and fallback responses for unsupported queries.

Collaborated on prompt and retrieval tuning to improve answer quality by reducing hallucinations and improving citation quality.

Experience

AI Engineer, Signal Orbit — designed retrieval workflows and chatbot UX.

Backend Engineer, TeleGrid — built Python services and API integrations.
