Skills

Python, OpenAI, FastAPI, Flask, HTTP APIs, PostgreSQL, Redis

Projects

Built a chatbot using the OpenAI API to answer user questions about company policies and product FAQs. The app exposed a REST API and used prompt templates, making it easy for the frontend to call the model and display responses.

Created a small admin interface to track conversation logs and prompt usage, with basic session bookkeeping in PostgreSQL. There was no retrieval system or workflow orchestration beyond passing the request to the model.

Deployed the app using a simple FastAPI service and container setup for internal demos.

Experience

Backend Engineer, SupportFlow — built internal APIs and service tooling.

Full-stack Developer, Altitude Studio — developed dashboards and customer-facing features.
