Skills

Python, OpenAI, LangChain, Flask, APIs

Projects

Built a small chatbot with LangChain and the OpenAI API to answer basic questions from a product knowledge base. It was a quick prototype using a few prompt templates and no formal retrieval strategies or business logic beyond the model response.

Created a toy project for learning prompt chaining and a lightweight web interface to submit questions, with minimal persistence and no production operations or evaluation pipeline.

Worked on a course project exploring LLMs and prompt templates, but did not integrate advanced state, retrieval, or backend workflows.

Experience

Independent developer — built learning prototypes and educational demos for AI projects.
