Skills

Python, LangChain, RAG, FastAPI, Vector DBs, Docs Search

Projects

Created a prototype for a document search assistant using LangChain and a vector database to help employees query onboarding materials. It used straightforward retrieval and basic prompt chaining, but the system was still in early development.

Built a simple dashboard to present documents and summaries, and tracked a few example questions to test retrieval quality. There was limited evaluation and no multi-agent orchestration.

Worked on pilot implementation for internal knowledge access with room to grow into a more robust product.

Experience

Product Engineer, Kindred Labs — built prototypes for internal AI search tools.
