Skills

Java, Spring Boot, React, Node.js, PostgreSQL, Docker, AWS

Projects

Built a Java-based microservices platform for shipping logistics and order processing. The system coordinated inventory updates, delivery status checks, and internal dashboards for operations staff using Spring Boot and PostgreSQL.

Developed a React frontend for tracking shipments and warehouse inventory, and integrated with internal APIs for route optimization and status notifications.

Deployed the platform on AWS with Docker-based services and supported observability workflows for incident response.

Experience

Platform Engineer, RouteFlow — built enterprise systems for logistics and inventory monitoring.

Software Developer, HarborOps — maintained backend services for operations teams.
